## 2. Spark plug set (5FL-R045Q-70)

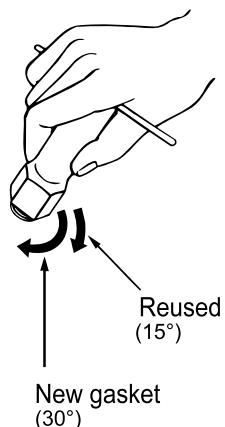

### Parts List

	No.	PART No.	PART NAME	Q'TY	REMARKS
	1	5FL-94700-70	PLUG, SPARK	4	NGK R0045Q-10

### CAUTION:

Since these spark plugs have a copper gasket, caution is needed during installation on the following points.

1. The tightening torque is 1.0 – 1.2 kg-m.
2. When not checking the torque, tighten by rotating through 30° after manual tightening in the case of new plugs. When reusing plugs, tighten by rotating through 15°.

### **3. AIS Plug Set (5SL-A4890-70)**

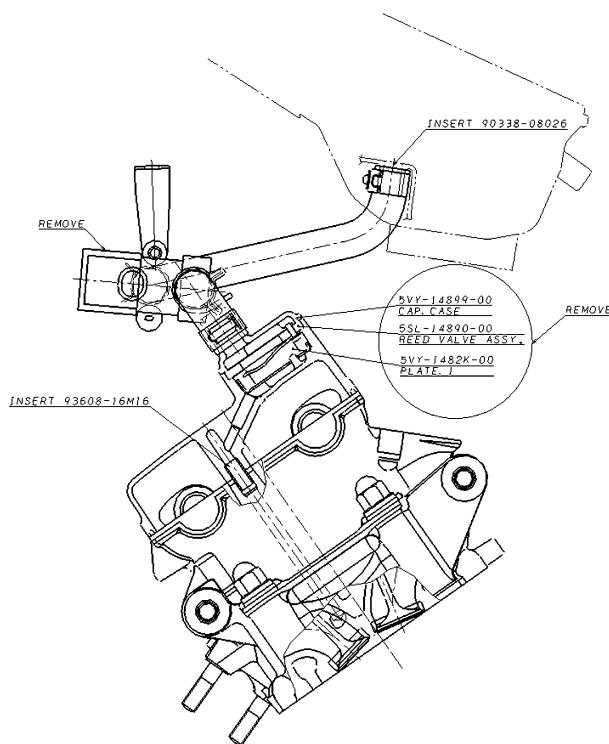

This plug set is used when the AIS (Air Induction System), an exhaust gas purification system, is removed.

#### **Parts List**

	No.	PART No.	PART NAME	Q'TY	REMARKS
	1	5SL-1482L-70	PLATE	2	
*	2	93608-16M16	PIN	4	
*	3	90338-08026	PLUG	1	

#### **Installation**

1. Remove the hose attached to the cylinder head cover and the air cut-off valve assembly accompanying the hose.
2. Remove the cap fitted to the hose and remove the reed valve and plate from the inside.
3. Install the plate (5SL-1482L-70) in replacement of the cap. Apply liquid gasket to the plate.
4. Remove the cylinder head cover and the four collars fitted to the cover. Install the PIN (93608-16M16).
5. After removing the hose connected to the air cleaner case from the air-cut assembly, insert the PLUG (90338-08026) onto the side of the air cleaner case to close the opening.

#### 4. Head Gasket

##### Parts List

	No.	PART No.	PART NAME	Q'TY	REMARKS
	1	2C0-11181-70	GASKET, HEAD CYL.	1	$t=0.40\text{mm}$
	2	2C0-11181-75	GASKET, HEAD CYL.	1	$t=0.45\text{mm}$
	3	2C0-11181-80	GASKET, HEAD CYL.	1	$t=0.50\text{mm}$
	4	2C0-11181-85	GASKET, HEAD CYL.	1	$t=0.55\text{mm}$

The thickness of the standard parts is 0.60mm.

These parts are used to adjust the squish height. In normal cases, use the one with -75 (0.45mm). After processing the cylinder (upper case), make sure to check the squish height and use the gasket so that the squish height becomes 0.60mm or above.

##### NOTE:

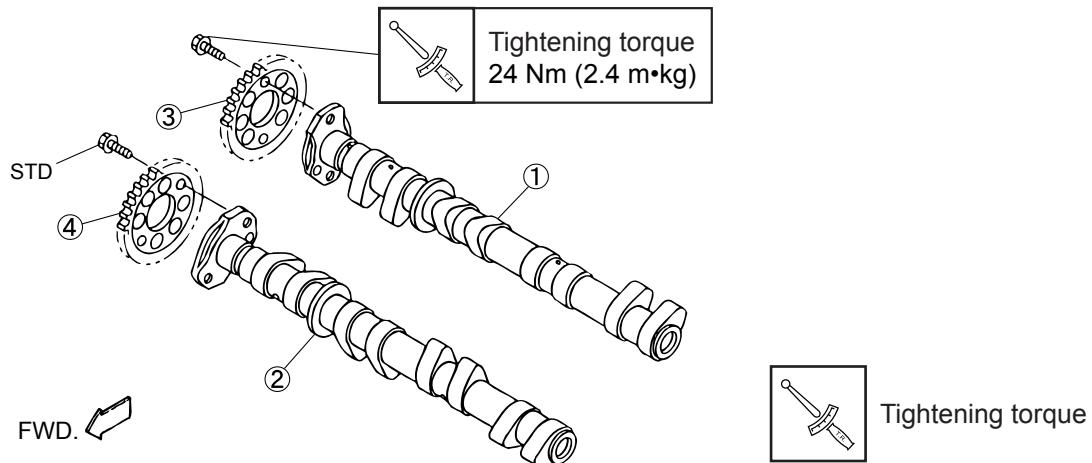

Squish height means the gap between the flat portion of the piston and the head cylinder.

## 5. Cam Shaft and Cam Sprocket

### Parts List

No.	PART No.	PART NAME	Q'TY	REMARKS
1	2C0-12171-70	SHAFT, CAM 1	1

3	2C0-12176-70	SPROCKET, CAM 1	1	
4	2C0-12177-70	SPROCKET, CAM 2	1	

### Assembly of Cam Sprocket

For the cam sprocket for racing kit, there are 5 mounting holes at the angle of  $\pm 1^\circ$  and  $\pm 2^\circ$  against standard mounting. Use of these holes enables regulation of valve timings.

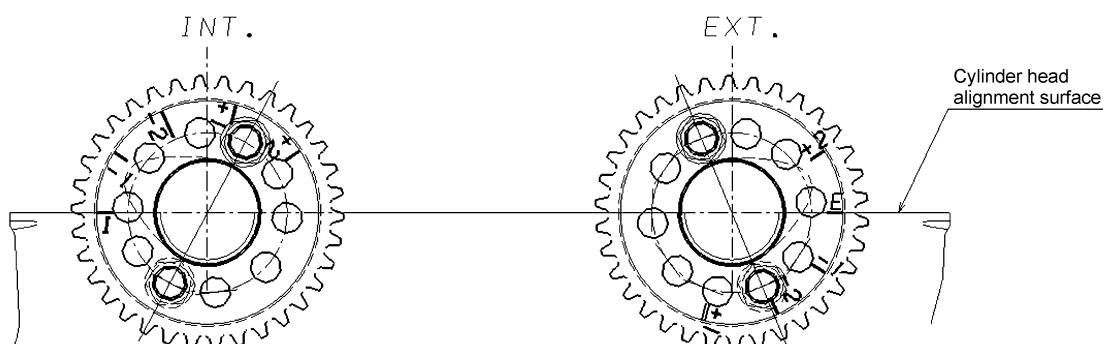

The following figure shows standard positions of the holes.

Align the timing mark of I (intake) and E (exhaust) to the alignment surface of the cylinder head upper surface. To regulate the valve timing, align the timing mark imprinted on the cam sprocket to adjust the angle shown by the timing mark figure against the standard angle.

#### CAUTION:

Make sure to align the valve timing when the cam shaft is assembled. If otherwise, no intended performance can be expected and more over, the engine may be damaged.

- Use of this set and a wire harness included in the kit enables regulation (or setting) of fuel injection and ignition timing, etc.
- For details as to how to regulate (or set) fuel injection and ignition timings, etc., refer to the manual in the CD-ROM that comes with the set.
- There are two types of basic control data for the ECU included in this set: SS (Super Sports) and ST (Stock Sports). They can be switched over and vice versa. To make it in the ST specification, just remove two couplers located at the lower left of the kit harness fuel tank. (See the figure below.)

<Setting-up Details>

SS specification: Kit cam shaft and kit exhaust set

ST specification: Kit exhaust

### CAUTION:

Make sure to use the ECU in this set in combination with the kit wire harness. Otherwise, it doesn't work.

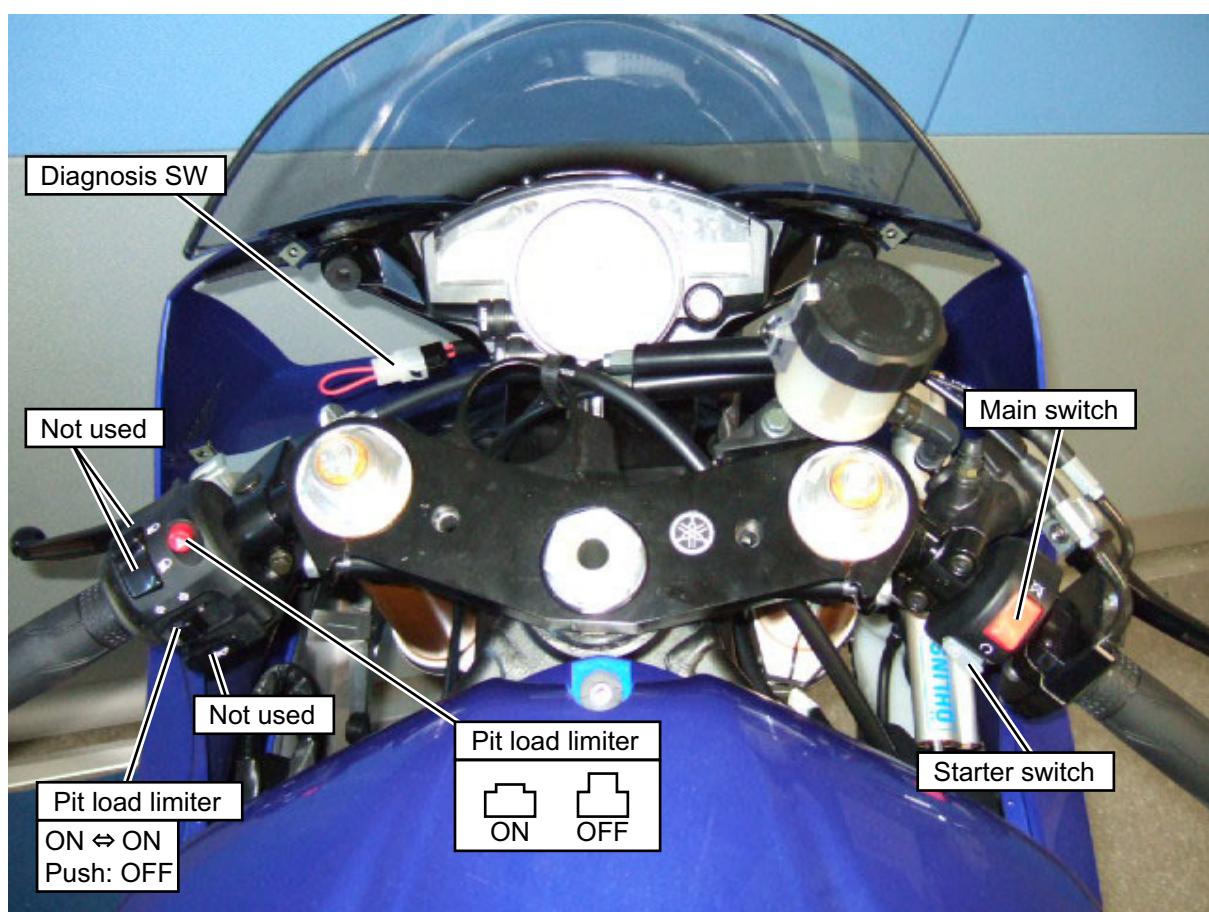

## 17. Wire Harness Set (2C0-F2590-70)

	1	2C0-82590-70	HARNESS ASS'Y	1	

- Make sure not to remove the AC GENERATION but keep it in working condition. Use of a single battery without the AC GENERATION will cause complete discharge of the battery in a short period of time and the motorcycle becomes inoperable.
- With the combination of this harness and the ECU in the kit, the engine kill switch (ignition cut) can work.  
Mount any type of switch to the black two-pole coupler under the tank, so that when the switch is turned on, the ignition is cut.
- In the kit harness assembly, each switch will be configured in the figure shown below.

- Use of the ECU in the kit and the harness allows functioning of the following codes in the STD diagnosis.

As the kit harness has a diagnosis SW. coupler and not the STD E/G STOP SW function, there is some difference in operating method.

\* YMS-Monitor: YEC FI Matching System also allows functioning of the code shown below.

For the details, refer to the operation manual of the YEC FI Matching System.

	8	5SL-92120-90	CUTTER, EXT 3	1	120°

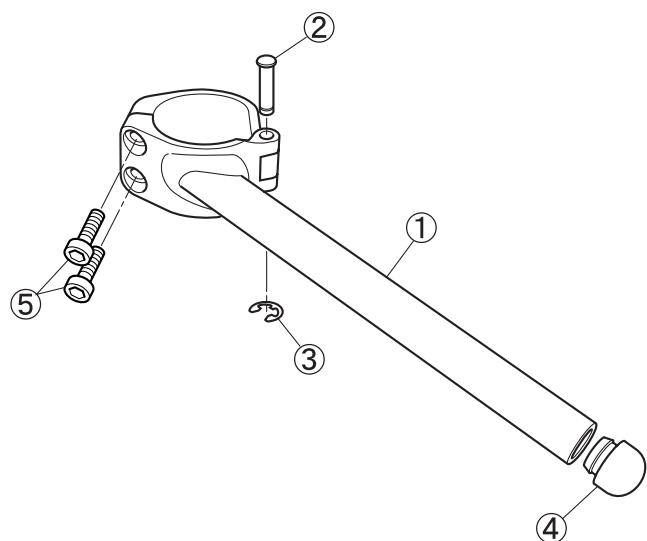

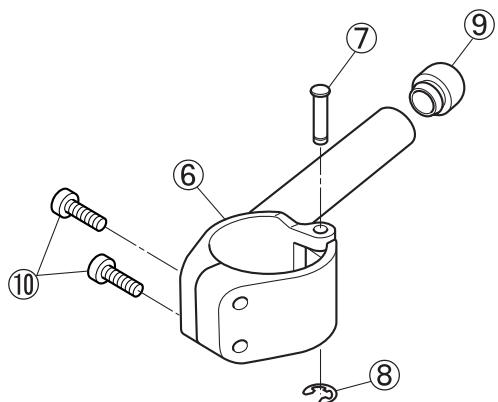

This tool set is used to make a fine adjustment of a contact between valves and valve seat.

- This set has three specification types of diamond cutter for each INT and EXT.
- Make sure to apply engine oil on the cutting surface before starting cutting.
- In the case that there is not sufficient space for the valve, use a 90 degree cutter to cut the seat so that the valve can be seated safely in place.
- Confirm the contact position and width between the valve and the valve seat. There is no need of adjustment if the valve has a contact surface of 1 mm width at the center of its 90-degree surface. If the 90-degree surface is dislocated to either side, or the contact width is 1.1mm or above, adjust them by cutting.
